

Table of Contents

How to Use

- 1 Challenge word problems
- 2 More challenge word problems
- 3 Kinds of numbers; using real-life formulas to solve word problems
- 4 Interpreting graphs
- 5 Introduction to vectors
- 6 Plotting points on the Cartesian graph
- 7 Practical application of slope
- 8 Word problems with different rates for different segments and a different equation for each segment
- 9 Scatter diagrams
- 10 Using linear equations to solve challenging word problems
- 11 More linear word problems
- 12 Solving two or more inequalities by graphing; application with word problem involving sales
- 13 Word problems requiring one or two equations; interpreting information from different kinds of graphs
- 14 Word problems requiring simultaneous equations
- 15 Word problems involving the break-even point
- 16 Break-even point; linear equations
- 17 Application word problems similar to coin and consecutive integer problems
- 18 Graphing word problems with exponential growth
- 19 More exponential word problems
- 20 Graphing exponential equations
- 21 Operations with exponents; graphing exponential equations
- 22 More exponential equations to graph
- 23 Finding area with polynomial multiplication; advanced polynomial addition and multiplication
- 24 Costs, revenue, and profit
- 25 More problems with cost, revenue, and profits
- 26 Polynomials that cannot be factored; graphing equations with negative exponents
- 27 Complex factoring
- 28 Velocity problems
- 29 Traditional measuring systems
- 30 More traditional measuring systems
- 31 Finding molecular mass; application of significant digits
- 32 Computer applications with base 16
- 33 Kepler's Third Law; astronomical units
- 34 Using the equation of a parabola to find maximum area

Solutions
